

Apollo TMS

Clinical System for Transcranial Magnetic Stimulation

Apollo TMS Therapy offers a new standard in depression treatment, designed for patient comfort alongside clinician-friendly innovation. The intuitive touchscreen interface makes it easy for operators to deliver safe and efficient TMS, and the sleek design of the unit helps patients to feel at ease during treatment.

The treatment software makes daily use and running of TMS easy and personalised, saving you time to focus on your patient's comfort.

Features

- intuitive touchscreen interface for protocol selection and patient management
- in-built protocols following best-in-class depression treatment guidelines
- compatible with state-of-the-art stimulation coils (see below)
- automatic Motor Threshold (MT) determination
- EMG for physiological MT determination
- secure and intuitive software to manage treatment sessions
- in-built safety management following Rossi criteria
- wide range of design customization options

Coil range includes: "aCool" (left), "pCool" (center), or PMR "round coil" (right)

Customize to your practice brand or decor

A complete turn-key solution
